

Vision Planning

In the vision planning stage of a project, Artistry Entertainment refers to what we do as Concept Engineering. Concept Engineering is a way of focusing on how all ideas are developed and integrated into the entire project. Artistry Entertainment's Concept Engineering process sparks the imagination and unifies ideas into a single vision!

Concept Refinement

One of the most important steps in any project is the initial planning phase. Development and design can not proceed without a clear understanding of the objective. Artistry Entertainment helps you evaluate and refine your idea by creating a working concept. This is where the important aspects of the project are outlined and written before the development and schematic work has begun. What is your scope? What is your budget? What is your schedule? These are important questions that need to be answered and Artistry Entertainment helps guide you through the process.

Concept Development

Artistry Entertainment's design team works to identify all the elements of your project and how they interact with each other. Schematic drawings are produced and carefully analyzed before any documents are sent to contractors. Artistry Entertainment provides expert guidance by creating detailed facility impact information, preliminary equipment layouts, block diagrams and schedules. Artistry Entertainment knows how to define a project for design and fabrication.
